

BIKE  
HIDE

Dear Cyclist...

## PLEASE TEST ME!

I noticed you use a bicycle cover, and am wondering if you would help me by testing a cover I've designed and installed nearby, as pictured above...

It's made from truck tarpaulin, and aims to make getting on your bike quicker and drier than existing covers and shelters, as well as to be durable and to be easy to leave in place. See [www.bikehide.org](http://www.bikehide.org) for a demo of how it works, or else lift the handle and flip the cover over the fence, then fit the bike's handlebars into the red-sided pocket through the fence, lock it and then re-close the cover (there's a cord to help pull it up).

Please email if you're interested, and send feedback, both positive and negative, to [bikehide@proton.me](mailto:bikehide@proton.me). This will help me know if it works as I hope for a cyclist that isn't me.

Thank you!
